Work experience

Backup Bygg AS on behalf of Ahtek AS
September 2019 — November 2019
IT-consultant

```
Work with cutting edge network technologies and open source Red Hat technologies within virtualization, automation and storage.
```

Teknisk Ukeblad Media AS
June 2017 — June 2019
Apprentice - ICT

At Teknisk Ukeblad Media AS, I did a number of things in accordance with the curriculum, which involved administrative work, service and support, infrastructure and development.

In administrative work, I have been responsible for corporate email systems, managing migration of Office 365 to Google GSuite (the reason for this transition was mainly much better support for certain integrations the company depended on). I reorganized the meeting room culture by setting up booking screens which integrated into our GSuite environment. I also held a few meetings to show how this works. I have had an active role in the management of our telephone subscription, as well as participated in the process of finding a new mobile subscription provider and purchasing on this front.

In service and support, I have mainly helped new employees get started, ordered equipment, set up desks with all the necessary equipment and testing of the system so that employees have a better everyday life. I have provided help and support for meetings and conferences.

Within infrastructure and development I have been working on independent projects. I asked my colleagues in the IT and Development Department about what we use of programs, technologies and equipment to run our websites. After digging and self-learning within what we used at the company, I set up one system of about 20 servers, all linux (Ubuntu 18.04 Bionic Beaver), where I had one pair of web servers, load balancers, file servers, and a database cluster. I think information security is important, so I configured everything to talk over an encrypted mesh network / software defined network .

Clas Ohlson Madla
October 2015 — October 2016
Service associate

At Clas Ohlson, I was primarily a very service minded salesman with good expertise in the computer system and technical products that they sold, and quickly became the Clas Ohlson Go-To-Guy for English speaking customers and customers in need of technical assistance regarding the products they wanted.

Xfiber
December 2014 — March 2015
Service associate

At Xfiber I was primarily at the network operations center programming carrier equipment, for example switches, routers, firewalls and modems. Setting up new equipment and reconfiguring equipment that customers returned, setting up equipment that was going out at sea on oil rigs and the likes, but also municipalities, schools and data centers. I was also responsible for ensuring that this equipment was packed well so that it did not incur damage during transport.

Norsk Data Senter AS
November 2012 — April 2013
Service associate

At the Norsk Data Center in Trondheim, I did a lot of service and support with clients in the state, schools and private institutions. We were primarily a supplier focusing on smart boards, smart tables, multi function printers, laptops and servers. Since I did not have a driver's license, I joined other technicians that were driving out.

Clas Ohlson Solsiden
July 2011 — June 2012
Service associate

At Clas Ohlson, I was mainly a service-minded salesperson who focused primarily on the data department, and the company's computer systems, which I taught to colleagues. Became a Go-To-Guy for English-speaking customers and customers who needed some technological help.

Qualifications

Certificate of Completed Apprenticeship - Passed with Distinction

Education

VG2; IKT Servicefag
August 2012 — July 2013

Ole Vig Videregående

- Basic Windows Server
- Hyper-V
- Setting up firewall on virtual machine
- Set up services such as web server, active directory, mail server, databases and file servers.

VG1; Service og Samferdsel
July 2011 — June 2012

Charlottenlund Videregående

- Started our own business with some classmates where we sold and imported biscuits!
- Technically responsible in LAN parties that another student company had.
- Budgeting and accounting.

Interests

My interest in my subject is very wide. Had I chosen one field to specialize in, it would have been Infrastructure and High Availability. I am very fond of hosting in general, both websites, games and services, are above average interested in machines, building, fixing, upgrading, very interested in servers, both with Unix and Windows based Operating Systems. Networking is also a big interest of mine.

In my spare time I do some hobby based testing of various programs, hosting and virtualization. Running a couple of websites yourself, hosting another couple for other people.

Although I am very interested in IT, I have a few interests outside:
Dog sports and training, airsoft, archery, rifle shooting, outdoor life, travel and language. Has also recently become very interested in electronics, DIY, metalwork and woodworking.

Other activities

Computer teacher for the elderly
June 2013 — June 2015

Rennesøy Frivilligsentral

When I lived at Rennesøy, I contacted the volunteer center at Rennesøy so I could get out a little to help others. Here I and the volunteer center went with the local car library on Rennesøy. They already had library days on Wednesdays with volunteers who drove the bus and picked up seniors who wanted to go to the library. Here I sat on Wednesdays and helped the elderly get into the computer world. Many of those I helped stay far away from their families would learn to use social media such as facebook, snapchat, but also how to use online banking and email. We had long cozy evenings with home baking, coffee, cocoa and good spirits as we learned from each other.

Saber Hosting
June 2012 — Current

Hobby Project

Saber Hosting, is one project I have been working on for the last couple of years. With this project I have driven to test a number of different firewalls, hypervisors and hosting systems. Also tests a lot of what I come across that I hear others talk about. With this project I have been working on topics such as firewalls, virtualization, high availability, uptime, optimization, service provision, storage, databases and load balancing,

The purpose of the project is to learn new things, preserve what I have learned with a practical project. The plan mend the project is to keep on with as I acquire more and more expertise and apply and maintain what I learn in practice.

Position

Jobs I'm interested in.

- **Part-time**
- **Full-time**
- **Projects**
- **Consultant**
